

PhonEX™ ONE

Manufacturing

PhonEX™ ONE enables organisations to reduce costs and improve productivity through monitoring and reporting of their telecommunication environment. It is user centric, making it a central point to manage usage of UC with the added ability to track multiple CDR sources such as: mobile (cellular) phone usage, mobility systems, PDA devices, teleconferencing, TelePresence, SIP appliances, gateways, routers and more.

KEY FEATURES

- Dashboard User Interface
- Web Based
- Centralised Solution
- 'Set and Forget' Reporting
- Query Reports
- VoIP QOS (MOS) Reports
- Real Time Alerts
- Call Budget & Barring Module
- Multiple CDR Sources
- Multi Lingual
- Multi Currency
- Multi Tariff

MIND CTI Ltd.

Founded in 1995, MIND CTI Ltd is a public company (NASDAQ: MINDO) a leading global provider of Call Accounting solutions with an installed base in excess of 20,000 in 45 countries.

The web-based, dashboard-style interface allows easy access, which is both secure and user relevant. Its powerful query tool ensures that only the required information is displayed in reports which can be automatically produced or generated on an ad hoc basis. Click through and drill down reporting further enhances the solution by reducing the time taken to create reports. PhonEX ONE is designed to reduce communications costs by up to 30%*, improve employee productivity, optimise network activity, and guard against internal and external fraudulent abuse, including toll fraud.

The automated reporting capability of PhonEX ONE ensures that accurate, relevant reports are delivered to business heads in a timely manner, typically via email.

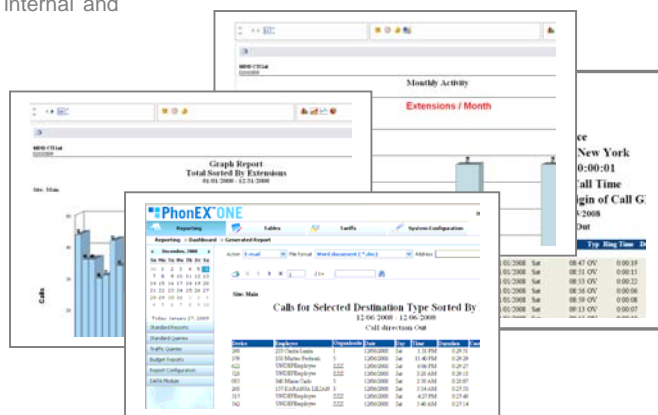

* Recent Gartner Report

With a focus on reducing costs and increasing efficiency, manufacturing organisations have a need to monitor and manage telecommunication costs often spread across multiple sites and departments.

By deploying PhonEX ONE, manufacturing organisations are able to distribute costs to the appropriate cost centers ensuring accuracy for the P&L of each department. Reports can also show unused extensions and trunk usage, assisting in network optimisation and design which leads to a reduction in the overall cost of ownership.

Employees and organisations can be protected from malicious calls and information leakage via granular reports, ensuring that calls through the network can be tracked to time of day, number called, and extension / employee.
